WORKSHEET- MCQ

PHYSICS

CLASS XI

WORK, ENERGY AND POWER

- A force $\vec{F} = (3\hat{i} + c\hat{j} + 2\hat{k})$ acting on a particle causes a displacement $\vec{s} = (-4\hat{i} + 2\hat{j} + 3\hat{k})$ in its own direction. If the work done is 6 J, then the value of 'c' is
(a) 0 (b) 6 (c) 1 (d) 12
 - When a body moves with a constant speed in a circular path, then
(a) work done will be zero (b) acceleration will be zero
(c) no force acts on the body (d) its velocity remains constant
 - The relationship between the force F and position x of a body is as shown in the figure. The work done in displacing the body from x = 1 m to x = 5 m will be
(a) 30 J (b) 15 J
(c) 25 J (d) 20 J
- 
- Two bodies of masses m and 4 m have equal kinetic energy. What is the ratio of their momentum?
(a) 1: 4 (b) 1: 2 (c) 1:1 (d) 2:1
 - A body of mass 10 kg initially at rest acquires velocity of 10 m/s. What is the work done?
(a) -500 J (b) 500 J (c) 50 J (d) -50 J
 - The potential energy of a particle of mass 5 kg moving in the X-Y plane is given by $U = (-7x + 24y)$ J, x and y being in metre. If the particle starts from rest from origin, then speed of the particle at t = 2s is
(a) 5 m/s (b) 14 m/s (c) 17.5 m/s (d) 10 m/s
 - A 300 J of work is done in sliding a 2 kg block up an inclined plane of height 10 m. Taking $g = 10 \text{ m/s}^2$, the work done against friction is
(a) 200 J (b) 100 J (c) zero (d) 1000 J
 - A spring of force constant 800 N/m has an extension of 5 cm. The work done in extending it from 5 cm to 15 cm is
(a) 16 J (b) 8 J (c) 32 J (d) 24 J
 - A particle moves with a velocity $(5\hat{i} - 3\hat{j} + 6\hat{k})$ m/s under the influence of a constant force $\vec{F} = (10\hat{i} + 10\hat{j} + 20\hat{k})$ N. The instantaneous power applied to the particle is
(a) 200 J/s (b) 40 J/s (c) 140 J/s (d) 170 J/s
 - A body of mass 5 kg, moving with velocity 10 m/s collides with another body of mass 20 kg at rest and comes to rest. The velocity of the second body due to collision is
(a) 2.5 m/s (b) 7.5 m/s (c) 5 m/s (d) 10 m/s

For questions 11 to 15, two statements are given- one labelled Assertion (A) and the other labelled Reason (R). Select the correct answer to these questions from the options as given below.

- A. Both Assertion and Reason are true and Reason is the correct explanation of Assertion.
- B. Both Assertion and Reason are true but Reason is not the correct explanation of Assertion.
- C. Assertion is true but Reason is false.
- D. Both Assertion and Reason are false.

11. **Assertion:** in an elastic collision of two billiard balls, the total kinetic energy is conserved during the short time of collision of the balls (i.e., when they are in contact).

Reason: Energy spent against friction does not follow the law of conservation of energy.

12. **Assertion:** Work done in moving a body over a closed loop is zero for every force in nature.

Reason: Work done does not depend on nature of force.

13. **Assertion:** A spring has potential energy, both when it is compressed or stretched.

Reason: In compressing or stretching work is done on the spring against the restoring force.

14. **Assertion:** Work done by friction on a body sliding down an inclined plane is positive.

Reason: Work done is less than zero, if angle between force and displacement is acute or both are in same direction.

15. **Assertion:** Water at the foot of the water fall is always at different temperature from that at the top.

Reason: The potential energy of water at the top is converted into heat energy during falling.
