

Diagram:

Theory:

Angle of deviation, $\delta = i + e - A$

Where, i - angle of incidence

e - angle of emergence

A - angle of prism

At the position of the prism for minimum deviation δ_m , the light ray passes through the prism symmetrically, i.e. parallel to the base so that when $\delta = \delta_m$, $i = e$ which implies angle of refraction at the first surface, r = angle of refraction at the second surface r' .
